
I bet you are reading this because you are interested about Pokemon Fire Red Save Editor. It is a program that will allow you to edit your Pokemon Fire Red game saves without the need of using a Hex Editor. It requires Java Runtime Environment on your computer for it to work. What can it do? Well, first of all, it has the ability to edit any data for any file on your computer or on an SD card inserted into your computer. This means that if there were bugs in some particular data, then they can be fixed easily just by editing them with this program. Another important feature of this program is that it has a built-in cheat engine. That means that you can quickly find and edit any data with a few keystrokes. But how does it work? It uses a special type of memory called Code Buffers. You can think of them as being similar to Arrays, but for Code instead of Data. This means that editing Code Buffers is extremely easy with this program, as there is no need to search for the memory address where the values are located. As soon as you enter their index number, you will be shown the value at that precise address in another window so you can edit it if necessary. Now let's talk about the type of data that can be edited with this tool. You can edit any types of data that you can see in the game's memory, for example, the wild Pokemon encounter rate, the Pokedex entries, Their level-up movesets and much more. So how do you unlock all these features? The program will only let you access all these features if you register it with an author name. If you are willing to register it with your name, you will have access to the cheat engine. But for you to be able to edit any file on your computer and on your SD card, you will first need to enter a license key given by the author of this program. These license keys can be acquired by visiting his website and filling out a short form. Sidenote: I am not the author of this program. I am merely another user informing others about this great tool that can be used as a Pokemon Fire Red Game Editor for those who cannot buy one because they live in countries where such programs are illegal or hard to find (China, Russia). Other data that can also be edited are the Pokemon's stats, the PokeGear's data, the names of wild Pokemon encounters and much more. Sidenote 2: For a limited time I am giving a free license key to a completely new version of this program! All you have to do is write in your comment. Your comment will appear in this article and you will receive a temporary license key. The people who read this article will get the free license key for this new version as soon as I publish it in my website. So what are you waiting for? Try out Pokemon Fire Red Save Editor, then follow these simple instructions to download it from here: <http://www.mediafire>.
